HPLight

Light based hair removal device for home use

For women and men!

- 100% effectiveness*
- No pain, no skin irritation
- Safe, easy and comfortable use
- Helps to save money and time

* When using HPLight according to the user's manual.

Nowadays HPLight is the most progressive technology for unwanted body and face hair removal.

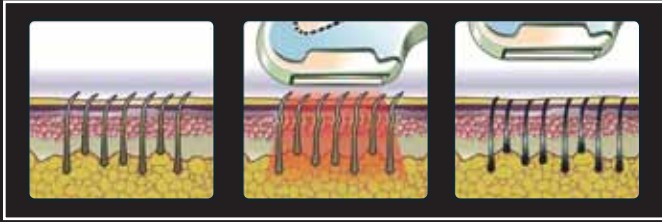

More details about HPLight at: www.hplight.de

Technology

HPLight is the newest version of the well-known IPL technology used by leading plastic surgeons and cosmetologists all over the world.

How it works

HPLight generates light impulses; light wave reaches the skin and goes 4 mm under the skin. Hair pigment (melanin) absorbs the light energy - this process is called 'selective photothermolysis'. When the light is being absorbed, the heat energy is produced: it heats the hair shaft and damages the follicle. The damage of the follicle stops hair growth for a long time.

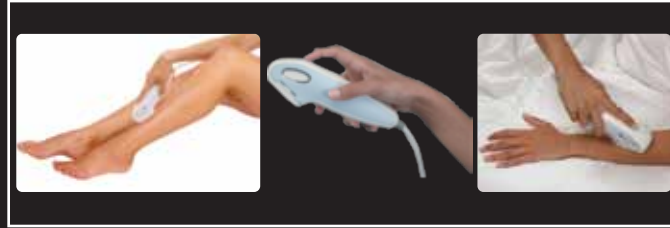

* Depends on individual characteristics and endocrine profile of the user. Additional information at: www.hplight.de

No pain, no side effects

Use of HPLight causes no pain, no allergic reactions or skin irritation; there are no red spots or ingrown hair.

Easy and comfortable use

HPLight combines professional device features with simplicity and comfortable use – get rid of unwanted hair with one touch!

Ahead of the time

HPLight is a new approach to modern hair removal practices. HPLight is a unique light based hair removal device (IPL) for home use.

Economy*

Unwanted hair removal with HPLight is inexpensive and cost effective compared to:

- photo / laser hair removal in beauty salons – for more than 6 times;
- wax hair removal in beauty salons – for more than 5 times.
