EWATage – the newest technology of non-invasive liposuction based on extracorporeal shock waves use

- **Non invasive liposuction is a very effective method that removes unwanted fat depots and treats cellulite without surgery. Its effectiveness is comparable to classic liposuction and has several advantages.**
- **Advantages of EWATage technology:**
 - No surgery: no scars, haematomas and edemas.
 - Safety: no complications.
 - No rehabilitation period is needed.
 - Effect lasts up to one year.
 - Safe and painless treatments.
 - Visible results after the first session.
- **How it works:**
 - The connecting tissues of the body undergo certain changes due to shock waves influence: fibrous adhesions resolve, lymphatic outflow increases, capillary blood supply and metabolic processes in the tissues improve.
 - As a result, hypertrophied adipocytes start to retract, which leads to fat depots volume reduction.
 - At the same time fibroblasts are stimulated and collagen production is increased, which helps to improve tissue turgor.
- **Fields of application:**
 - Cosmetology: body shape remodeling, cellulite treatment, lifting.
 - Orthopedics: muscle pain relief, joint and site of fracture pain relief, calcaneal spur, etc.

EWATage SC

EWATage SV

EWATage SD

EWATage SC

- **EWATage SC** is used for cellulite treatment, body contours reshaping, muscles and connecting tissues strengthening. The depth of shock wave penetration is 50 mm.
- **Option:** innovative vibrotherapy applicator is designed to stimulate the muscles at 1-35 Hz frequency. Vibrostimulation is a perfect complement to shock wave therapy in treatment of cellulite, congestion and muscle spasms. It also improves blood and lymph circulation in connecting tissue extracellular matrix and stimulates metabolism.

- **Treatment results:**
 - Slimmer body.
 - Reduction of cellulite.
 - Improved skin elasticity.

EWATage SD and EWATage SV

- Shock wave therapy devices EWATage SD and EWATage SV are equipped with:
 - Focused shock wave applicator for treatment of 'deep' problems, strengthening and lifting the connecting tissues.
 - Non-focused wave applicator for skin surface alteration treatment and stimulation of metabolic activity of skin cells.
 - Vibrotherapy applicator (optional).

- **Effectiveness:**
 - The effect is visible after first treatments and has an incremental lasting action. The course consists of 6-10 sessions conducted during 4-6 weeks.
- **Advantages:**
 - Effective for surface and deep zones treatment.
 - Ergonomic and simple to use.
 - Available in different colors.
 - Available in two versions: as a standalone EWATage SD or a table top EWATage SV.
- **Advantages of EWATage shock wave therapy:**
 - Visible results after first treatment.
 - Fat is split and comes out in a natural way; there is no interference into metabolic processes.
 - Skin is not damaged.
 - Treatment is safe and painless.
 - No rehabilitation period is needed.
 - No complications like fibrosis, scars, haematomas and infections.

Diona: Cosmetology and physiotherapy unit

- Modular device integrated into multifunctional trolley with LCD touch screen.
- Modular configuration system allows to use different modifications of the unit from the simplest (one module) to professional cosmetology complex with all modern facilities (four modules).
- Digital technologies make it ergonomic and simple to use.
- **Treatment areas:**
 - Body shape remodeling.
 - Cellulite treatment at 1-4 stages.
 - Face and body lifting.
 - Plastic surgery recovery.

Son: Ultrasound module

- The device allows to conduct ultrasound treatment and phonophoresis at 1 and 3 MHz frequency.
- **Treatment results:**
 - Slimmer body.
 - Reduction of cellulite.
 - Improved skin elasticity.
- Due to ultrasound influence medical and cosmetic products can penetrate into the skin and thus improve the effectiveness of cosmetic treatments.
- Microvibration accelerates metabolism, activates collagen synthesis with fibroblasts, increases tissue enzymatic activity, which leads to faster regeneration and wound healing and retracts edema.

Kur: Electrotherapy and ultrasound module

- Electrotherapy with average and low frequency current: electrophoresis, galvanization, microcurrent, current for muscle stimulation, impulse current, electrodiagnostics.
- **Treatment results:**
 - Drainage.
 - Improved blood circulation and trophism of the tissues.
 - Increased lymph outflow.
 - Accelerated regeneration, better wound healing.

Vac: Vacuum module

- Ideal complement to treat cellulite and improve body contours.
- Vacuum massage stimulates intercellular liquid flow and fat tissue drainage, indirectly facilitates lymph drainage, improves tissue trophism and muscle tone.

SPA and Wellness equipment

Calipso Pacific hydromassage tub

- Ergonomically shaped tub has special support for legs and builtin handrails. Tub can be filled with fresh or sea water.
- **Features:**
 - Massage of 2 zones.
 - Automatic water/air intervals.
 - 60 nozzles for water and air.
 - Adjustable water and air pressure.
 - Automatic water draining.
 - Vibration hydromassage with possibility to add aromatic flavor and other components.
 - Aromatherapy and inhalation.

Calipso Premia hydromassage tub

- Body shaped tub has special shoulder for arms for reclining position treatments.
- **Features:**
 - Massage of 5 zones.
 - 6 standard programs and individual programming – possibility to switch on/off massage of particular zones, selection of massage timing, switching of all massage zones simultaneously.
 - 144 nozzles for water and air.
 - Vibration hydromassage with possibility to add aromatic flavor and other fine components.
 - Aromatherapy and inhalation.

Calipso Extra hydromassage tub

- Special anatomic shape of the tub with hollows for arms. Tub can be filled with fresh or sea water.
- Water and air are combined in one channel system, thus it's possible to have vibration massage with blend of aromatic flavors. General and zone massage with aromatherapy and inhalation.
- **Features:**
 - Massage of 8 zones.
 - 7 standard programs and individual programming – possibility to switch on/off massage of particular zones, selection of massage timing, switching of all massage zones simultaneously.
 - 172 nozzles for water and air.
 - Adjustable water and air pressure.
 - Automatic water filling and draining.
 - Built-in chromo therapy option: 80 light emitting diodes with underwater lighting system consisting of 4 colors (white, blue, red and green) and automatic color change every 15 seconds.

Calipso Luxury hydromassage tub

- The top version of Calipso family.
- Ergonomically shaped tub has special support for legs and built-in handrails.
- Tub can be filled with fresh or sea water.
- **Features:**
 - Massage of 8 zones.
 - 16 standard programs and individual programming – possibility to switch on/off massage of particular zones, selection of massage timing, switching of all massage zones simultaneously.
 - 252 nozzles for water and air.
 - Automatic water filling and draining.
 - Built-in chromo therapy option: 80 light emitting diodes with underwater lighting system consisting of 4 colors (white, blue, red and green) and automatic color change every 15 seconds.
- Different facing variants are available: glass mosaic, dichromatic plastic, bamboo, stainless steel.

Calipso Tropicana Vichy shower

- Provides high pressure and low pressure spraying water massage.
- The system consists of vertical column with shower pressure and temperature control and shower itself.
- Shower system (horizontally located pipe with five individually adjustable heads) is located above massage plastic couch.
- Hygienic Vichy plastic couch has side drainage hollows and a drainage hollow on the legs' side. Alternatively Calipso RELAX couch can be supplied.
- Additionally a screen can be installed to protect from splashing.
- Also there is an option to install a rinsing shower used after mud or sea water treatments.

Calipso Comfort SPA couch

- Heated elastic membrane serves as an effective area for treatments. It separates patient's body from heated water inside the couch, presses tightly to the body, repeating its shape and enhancing warming effect.
- The body does not contact with the water during the whole treatment.
- The couch is designed for professional cosmetology body treatments. The patient enjoys the feeling of 'weightlessness', wrapped in warmth and music sounds.
- Electromechanical height adjusting. The couch remains on the same height and warm water, located underneath the film, wraps the body.
- The patient is covered with a thermal blanket consisting of two parts.
- Different facing variants.

Calipso Relax SPA couch

- Couch for massage and relaxation.
- Electromechanical height adjusting without use of air compressor.
- Couch always remains on the same height. When the tub goes up, the patient feels warm water around his/her body.
- Thermal blanket for wrapping is included in the set.

- **Features:**

- Massage module.
- 20 massage nozzles.
- Massage flow is moving from the hips to the shoulders and back.
- 'Stop' button interrupts the treatment at any moment.

- Different facing variants.

Calipso Mare water and dry massage couch

- Waterbed massage: water flow massages patient's body through the mattress film like it is done manually. Water nozzle movements are operated by computer program.

- **Features:**

- Designed for massage and relaxation. Can be used in beauty parlours, wellness, SPA and fitness centers.
- Water pressure massage: the patient remains dry lying on the waterbed which has comfortable warm temperature.
- Operation of massage areas is divided into 6 zones and is done by water flows coming from 24 nozzles. There are 3 modes of massage intensity.
- Possibility to set individual massage programs.

- Different facing variants.

Photo epilators

HPLight

Photo epilator for home use

- HPLight is an innovative product from MS Westfalia GmbH Home Product line.
- HPLight is a portable photo epilator for effective removal of unwanted hair at home. Light, safe, painless and not expensive device allows to achieve professional results without visiting a cosmetologist.

- **Advantages:**

- Use of new professional technology of photo epilation (IPL).
- High efficiency with minimum size (weight about 1,2 kg).
- Economic: qualitative photo epilation substantially less expensive than in beauty parlours.
- Safe and easy use: no special consultation is needed.
- Large size of light spot (6 cm²).
- Painless treatments.
- Home use at any convenient time.

MS Westfalia GmbH headquarters in Troisdorf, Germany

MS Westfalia GmbH (established in 1995, Troisdorf, Germany) is an ISO-certified (ISO-9001, ISO-13485) medical equipment manufacturer, producing and supplying a wide range of equipment, including modular cleanrooms, ENT units, X-ray machines, equipment for cosmetology and physical therapy.

MS Westfalia GmbH provides a full range of services:

- Consulting and planning.
- Project design and development.
- Service engineering of the equipment supplied.
- Logistics service.
- Flexible payment terms.

Range of cosmetology equipment supplied by MS Westfalia GmbH:

- Photo epilation equipment
- Microdermabrasion equipment
- Cryotherapy equipment
- Cosmetology chairs
- Cosmetology modular units
- Body shape remodeling/cellulite treatment
- Solariums
- Complex treatment equipment
- Complex rehabilitation equipment
- Thalassotherapy equipment
- SPA treatment
- Warmth treatment
- Column hydrotherapy equipment

Range of medical equipment supplied by MS Westfalia GmbH:

- Flexible endoscopy
- Defibrillators
- Cardiology
- Cosmetology, Wellness, SPA
- Lithotripters
- ENT equipment
- Rigid endoscopy
- Modular cleanrooms
- Monitors and pulseoxymetry devices
- Anesthesia and respiratory equipment
- Neurophysiology
- Ophthalmology
- X-ray equipment
- Cyber knife system
- Ultrasound scanners
- Physiotherapy
- Surgery
